U.S. Patent and Trademark Office PTOL-303 (Rev. 08-06) Continuation of 3. NOTE: Newly added claim 12 is a broader recitation of claim 1. Therefore, a different reference could be applied to claim 12.

Continuation of 11. does NOT place the application in condition for allowance because: The applicant's argument that "However, there does not appear to be any disclosure in the specification of Matsumoto that controller 31 controls an illumination of light, as claimed in claim 1", is not persuasive. As stated in the final rejection, Matsumoto discloses drying speed correlated with environmental temperature or humidity may be previously obtained in view of conditions of placing the ink jet printer, so as to compensate for drive data of the heating elements" (Column 12, lines 25-28) and "An ultraviolet emitting laser unit (UVL) 152 as ultraviolet ray emitter unit is disposed instead of the IRLDs 130 of FIG. 16, and extends in parallel with an array of nozzles 153 in an ink jet head 154. After recording material 155 is provided with an image by the ink jet head 154, the ultraviolet emitting laser unit 152 is controlled by an ultraviolet intensity adjustor 160 or control unit for intensity of ultraviolet rays 157 according to an ejected amount of an ink droplet 156, which is cured or hardened by the ultraviolet rays 157. This control with the ejected amount is effective in efficiently curing the ink droplet 156. Note that an amount of the ultraviolet rays 157 may be changed instead of the intensity" (Column 14, lines 35-52). Therefore, Matsumoto meets the claimed limitations since one of ordinary skill in the art could use UVL unit to cure the ink instead of the heating elements as taught by Matsumoto.
